

Parts of the Eye

Amazing Fact

Women blink twice as much as men but babies don't blink as much as adults.

Challenge

Match up the parts of the eye to the description of what they are and what they do. Then label the diagram.

iris

These are small hairs that protect the eye from dust and dirt.

eyelid

This is the black part of the eye which lets the light in.

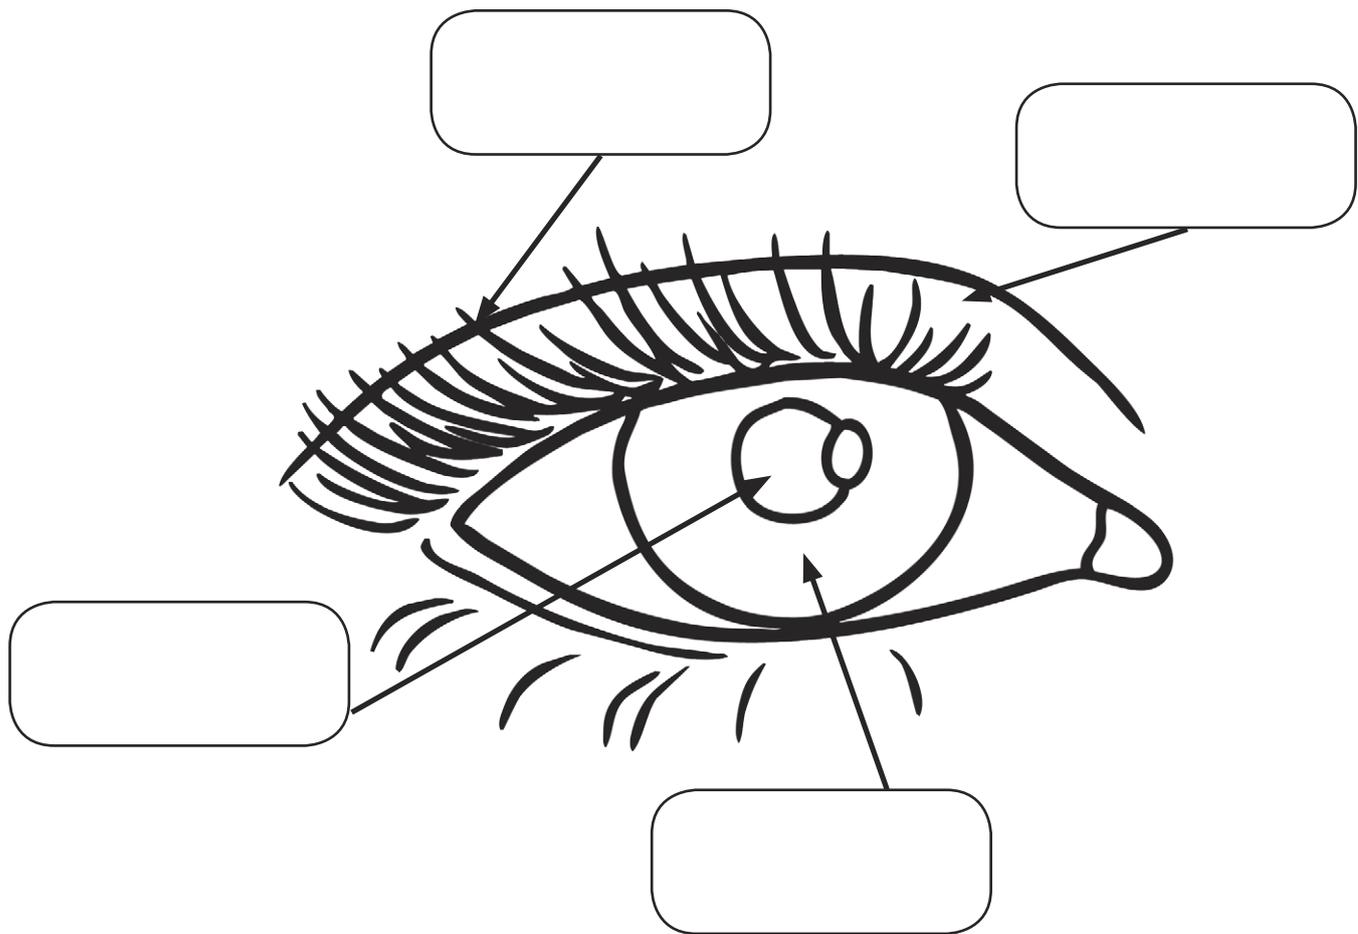

eyelashes

This is the coloured part of the eye. It controls how much light can enter your eye.

pupil

This opens and shuts. It helps people to sleep and also protects the eye.

Label the diagram below.

You could also try to find out:

- which animals don't blink;
- what the purpose of blinking is;
- why women blink more than men.
